Problem Statement

Millions of skilled workers in India struggle to find consistent work due to lack of digital access, poor visibility, and dependence on middlemen. At the same time, people and businesses find it difficult to hire verified, nearby service providers. Most platforms today focus only on urban or white-collar jobs, leaving skilled trade workers behind. There's a clear gap between skill availability and service demand. SkillBridge aims to bridge this gap with a smart, AI-powered platform that connects skilled individuals directly with real job opportunities.

Objectives

The primarygoal of the SkillBridge project is to create a functional and accessible digital ecosystem that empowers skilled manual workers and streamlines their connection with job providers. The project focuses not only on job discovery but also on promoting trust, transparency, and inclusivity in the informal labor sector

To achieve this, the specific objectives of the project are outlined below:

Objective 1 – Requirement Analysis & Platform Foundation To design and develop a digital platform that connects skilled manual workers with local job providers, reducing communication gaps and worker idle time.

Objective 2 – Core Functionality & User Experience

Toimplement essential system featuressuch asskill-based categorization, location- based search, job-type filtering, and real-time availability to enhance usability and efficiency.

Objective 3 – Trust & Reliability Mechanisms

Toestablish credibility within thesystemthrough profile verification, rating mechanisms, and review systems, ensuring reliable and transparent worker–employer interactions.

Objective 4 – Intelligent System Enhancement Using AI/ML

TointegrateAI andMachine Learning techniques for personalized job recommendations, feedback sentiment analysis, and dynamic trust scoring that improves over time.

Objective 5 – Accessibility, Scalability & Inclusivity

Toensure the platformis accessible touserswith low digital literacy through multilingual support, icon-driven and voice-assisted interfaces, while maintaining scalability for future regional and sectoral expansion.

Literature Review

Proposed Methodology

Methodology Overview The SkillBridge system is developed using a phased and agile-based approach to ensure scalability, usability, and continuous improvement. The platform follows iterative development with regular validation and feedback integration.

Development Approach

- Requirement Analysis & Planning
- UI/UX Design (User-Centric & Accessible)
- Frontend Development

- Backend Development
- Database Integration
- AI/ML Integration
- Testing & Validation

System Architecture :

Use Case / System Flow

Conclusion

Skillbridge demonstrates the effective use of artificial intelligence in a service- based marketplace by connecting skilled workers with customers efficiently. Through AI-powered recommendations, location-based matching, sentiment- based feedback analysis, dynamic pricing, and secure face-recognition authentication, the platform offers a reliable, transparent, and smarter alternative to traditional service-matching systems.
