Professional Summary

Result-driven Computer Engineering student (2026 Batch) with a strong foundation in C, C++, Python, and Web Development. Proven ability to build responsive, scalable applications and real-time computer vision systems. Seeking to leverage technical expertise in software development and problem-solving for challenging roles.

Education

BTech Computer Engineering

July 2022 – Expected May 2026

GH Raison College of Engineering & Management, Pune
CGPA: 6.51

HSC Computer Science

2019 – 2021

Thakur College of Science & Commerce, Mumbai
Percentage: 70.8%

SSC

2018 – 2019

Purushottam Vidhyalaya, Mumbai
Percentage: 65.20%

Technical Skills

Programming Languages: C, C++, Python, Java (Basic)

Web Development: HTML5, CSS, JavaScript

Databases: SQL

CS Fundamentals: Object-Oriented Programming (OOP), Data Structures & Algorithms

Tools & Libraries: VS Code, Jupyter Notebook, Git, GitHub, Roboflow

Projects

Cantonment Area Detection System

[\[GitHub Code\]](#) [\[Live Demo\]](#)

Tech Stack: HTML5, CSS3, JavaScript, Google Earth Pro, Roboflow

- **Frontend Development:** Architected a responsive web dashboard using **HTML, CSS, and JS** to visualize YOLOv8 detection results, streamlining the transition from raw satellite data to actionable insights.
- **Data Engineering:** Curated and annotated a high-resolution custom dataset using **Google Earth Pro** and **Roboflow**; implemented image tiling and normalization to ensure data consistency for model training.
- **Implementation:** Managed the end-to-end data lifecycle, including collection, quality control, and data augmentation, which supported the model in achieving a 79% mAP@0.5 across diverse terrains.
- **Deployment:** Integrated the deep learning backend into a user-friendly interface, reducing manual analyst review time from several hours to a few seconds per image.

Doctor Appointment Booking System

[\[GitHub Code\]](#) [\[Live Demo\]](#)

Tech Stack: HTML5, CSS3, JavaScript, SQL

- **Profile Management:** Developed a dynamic doctor profiling module to display specializations, clinical experience, and certifications, aiding patient decision-making.
- **Appointment Scheduling:** Integrated a real-time booking interface that cross-references doctor availability with clinic operating hours to reduce scheduling conflicts.
- **Review System:** Implemented a patient feedback and rating mechanism using SQL database integration to build service credibility and foster trust within the platform.

Achievements & Extra-Curriculars

Codement National Hackathon Finalist: Led a development team in the finals under the Healthcare theme, demonstrating rapid prototyping and collaborative problem-solving.

NSS Volunteer: Collaborated with government bodies and NGOs on impactful community development projects, strengthening organizational and leadership skills.
